

NYLOPLAST PROJECT PROFILE

CITY OF OTTAWA—PILOT PROJECT

PROJECT LOCATION: Ottawa, ON Canada
INSTALLER: Sewer Maintenance Ottawa
DATE OF INSTALLATION: November 14, 2007

PROJECT DESCRIPTION

Replacement of existing pre-cast catch basin with Nyloplast 750mm catch basin. The city was having problems with leaky joints and settling around the top of the structure as it is located in front of one of the cities bus terminals and was exposed to heavy loading on a regular basis.

PROJECT HIGHLIGHTS

The sewer maintenance department with the city of Ottawa realized that with Nyloplast standard watertight joints and lightweight plastic structures, it would make sense to go with this system. The existing leads were both CMP and RCP and with the use of a coupling system the transition to the new catch basins was seamless. Overall structure height was just a little over eight feet and they were amazed at the quick and easy installation of Nyloplast catch basins.
